

A major computer chip defect is putting small businesses at risk and exploits sensitive data.

We need to hear from you.

Have you been unsure on what patches to install that help mitigate the security threat? Have you experienced a slowdown in your computer's or network's performance after doing so? Please fill out the form below and tell us – your feedback will help us inform the small business community on how to best protect their information from cyber threats and manage the performance and cost burdens caused by the fixes.
